The American Cancer Society is an eligible 501 (c) (3) tax-exempt organization. | Terms of use What will cause an electric motor, running a saw board, to suddenly start running at a faster rate than usual? As we discussed, a generator converts mechanical energy into electricity. An engine works on the same principle, but in the opposite direction - it converts electrical energy into mechanical energy. To do this, an engine needs a special type of magnet called an electromagnet. In its simplest form, this consists of an iron rod wrapped in a coil. If you pass an electric current through the wire, a field is formed in the iron rod, and it becomes a magnet, with a defined north and south pole. Turn off current and disappearing attributes. In themselves, electromagnets are useful things. You can use them to receive metal objects, carry objects somewhere, and then release them by simply turning off the power. For example, roofers use them to pick up nails that have fallen by accident into the host's yard. And vandal yards have cranes with integrated electromagnets strong enough to receive and move entire cars. Electromagnets are especially useful when they are placed on an axis between two fixed magnets. If the south pole of the electromagnet is located opposite the south pole of a fixed magnet and its north pole is against the north pole of the other fixed magnet, the electromagnet will rotate until the opposite poles line up. This will not be useful, except that the polarity of the electromagnet depends on the direction of the current flow. Cross the current in one direction, and the north pole of the magnet will be on one side; Reverse the current flow, and the north pole will be on the opposite side. In the motor, a device called a switch reverses the direction of the current. When the poles of the electromagnet flip back and back, the magnet can rotate without interruption. Here's a brief explanation of course, so you might want to read How Electric Motors works for all the details. As it turns out, the mechanical energy generated in an electric motor can be used well in many different machines. Many tools in your garage, indoor devices and children's toys play with engine based. Some of these engines require a large current to operate. Others, such as small DC engines used in robots and models, need very little voltage or current to operate efficiently. We will continue our conversation about voltage and current in the next section. After disassembling a fence trimmer I obtained a universal motor (meaning it can run on either ac or dc) It has a power rating of 400W, and a label indicates that it has 1/2 horsepower. Does anyone have any idea what to do with it? It is quite small (15cm X 5cm X 5cm) and under reasonable conditions Thank you for Response. 13 - General Motorsit was a painful year for General Motors. In November, CEO Mary Barra announced the Detroit automaker would lay off 14,000 employees and halt production at five plants in the U.S. and Canada. The closure of its Chevrolet Lordstown plant drew particular attention from Ohio politicians on both sides of the aisle and mesmerizing tweets from President Donald Trump - to no end. Declining sales in GM's two largest markets, the United States and China, have had company executives preparing for a bigger downturn. Despite the strong performance of its SUVs in the U.S., Overall unit sales fell 1.6% in 2018.Key Metrics & Financials (Last Financial Year)FactsSee Company Full ListWhen you start hearing about in-day trading with volume, you know markets that have received foam and bought and held long-term stocks are not a top priority for investors. But times like this are exactly when it should be. Trying to time trading is difficult business, even for Wall Street bigshots who have been trading for decades with the state of the art equipment and a lifetime of institutional knowledge – and sometimes a degree of advancement in mathematics. Trying to outsmart these people or play their games for long periods of time can be entertaining, but if your goal is to make money, I won't bother. Finding companies with solid foundations in key industries and buying in the long term can be boring, but it makes money. InvestorPlace - Stock Market News, Stock Advisory & Trading Tips 9 Stocks That Investors Think Are Amazon Next Here are 7 Long-Term Stocks to Buy You'll Want to Hang Up: Amazon (NASDAQ:AMZN) Clorox (NYSE:CLX) JD.com (NASDAQ:JD ) PayPal (NASDAQ:PYPL) Qualcomm (NASDAQ:QCOM) Shopify (NASDAQ:SHOP) Sony (NYSE:SNE) These companies deserve your attention for the future because of how well they have handled the past. Long-term stocks to buy. Amazon (AMZN) Source: Sundry Photography/Shutterstock.com There are few companies that can turn into a global retail brand the way Amazon did. From a modest online books seller in the 1990s to a juggernaut market in just three decades, Amazon has been on quite the journey. Now it's hard for most Americans to imagine a day that doesn't somehow involve an Amazon product. Whole Foods for grocery shopping (if you don't buy materials off your website). Prime Minister to watch programs and movies. Of course, its retail operations and bread and butter logistics. And of course, cloud computing giant Amazon Web Services offers a lot of cash to keep all of its new and existing joint venture active. When the epidemic struck, everyone realized how valuable AMZN had become. But its value is much more now, as it holds a market capitalization nearly \$16 billion. It is kind of a stock index of the entire modern economy. If you are a long-term U.S. company, AMZN is a long-term stock for you. Rising 70% in the past year, its pace may change but its continued growth is not the question. Clorox (CLX) Source: TY Lim/Shutterstock.com start-up of this stand-up company directly opposed to AMZN. CLX has been making a product, bleach, for nearly 50 years and building a big business out of it. Now more than 100 years old, CLX has diversified its product line a bit, albeit insignificantly. It now has a portfolio of about 50 brands sold in more than 100 countries. Trusted names such as Glad, Handi Wipes, Liquid-Plumr, Pine-Sol and Tilex along with its Clorox catalogue line. This is a classic long-term U.S. stock. During the epidemic, cleaning and disinfection products are in high demand at home and abroad. CLX shares remained steady. And that is to be expected after growing through two world wars, great crises and everything else that has gone its way. Nine stocks that investors think Amazon is next up 24 percent in the past 12 months, are still trading at P/E of 21 – lower than the S&P 500 average – with more growth ahead. JD.com (JD) Source: Sundry Photography/Shutterstock.com The growth of digital channels in the US is reflected in China, where its domestic market is almost an order of greater intensity than the US market. The potential is enormous. In addition, the Chinese market operates slightly differently than large U.S. companies that tend to work together to leverage their most important assets instead of trying to compete directly. But they also diversify. For example, JD is like China's AMZN (and other Asian countries). It has expanded into logistics, AI, fintech and other fields. However, for all its strength, it trades at one-tenth of AMZN's market capitalization and that's after running 127% in the last 12 months. There are certainly some trade risks here, as the U.S. threatens to delist Chinese companies from U.S. exchanges, but JD is far down that list. It is a leading long-term stock for Chinese and Asian consumers. PayPal (PYPL) Source: JHVEPhoto/Shutterstock.com This is the company that launched Elon Musk before he became the maverick CEO we all know today. Even then Musk was a handful, deposed as CEO after a few years but still holding more shares than anyone else when eBay (NASDAQ: EBAY) bought PYPL in 2002. That became seed capital for Musk's later projects. But in addition to personality, PYPL is a pioneer in electronic payments and is currently paying peer-to-peer (P2P) with its Venmo app. Time and again Wall Street has dismissed the PYPL as having no kind of financial reputation or muscle to take on major financial institutions in the digital space. And time and again, the PYPL proved them wrong. The past year has been a benefit to the PYPL's model and has shown that the big banks have not been fully ready for rapid and big change to digital. And PYPL currently has credit services as well as other payment platforms. 9 Stocks That Investors Think Are Amazon Next Stocks Up More in the last 12 months and now it's here to stay. Qualcomm (QCOM) Source: jejjim/Shutterstock.com We are also ensconced in the mobile age at the moment. By that what I mean as the digital revolution has moved to the point where wireless networks keep us connected almost all the time, much to the frustration of some. But the reality is, despite the downsides, there are a lot of upsides too. And now that 5G telecommunications technology is upon us, data will be flowing faster than before. One of the beneficiaries and leading the way in promoting further digital migration is QCOM, one of the world's leading telecommunications companies. Its business model is unique because it develops chips and telecommunications equipment but earns technology licensing money for others to produce and also cuts sales. Both U.S. and Chinese (and others) phone makers rely on modern QCOM chips, especially for 5G. QCOM has signed a new agreement to rekindle ties with Chinese phone makers earlier this week. As long as mobility is one thing, this is a long-term stock to own. The stock has risen 75 percent in the past 12 months, but the stock is trading at P/E of 35. Shopify (SHOP) Source: Paul McKinnon/Shutterstock.com With the unemployment rate nearing 6.7% and many states admitting that the epidemic has hampered their ability to count exactly who is unemployed, there are plenty of Americans trying to figure out how to bring in a wage. Many have turned to Uber or Lyft drivers, although the number of passengers is now also significantly reduced. And taxis are even worse. That has led many people to try to turn their ho preferences into businesses. And that's where SHOP comes in. It's a cloud-based platform that helps small and medium-sized businesses build professional websites. The stock has risen nearly 1000% in the past three years, and much of that has come in the past two years, when the economy has slowed. Vaccines may be on the way, and the government is working through a stimulus package, but the damage done to the economy has not yet been clearly seen for all the other issues facing the nation. 9 stocks that investors think are Amazon next This stock has risen 167% in the past year and has plenty of growth potential ahead. Sony (SNE) Source: Girts Ragelis/Shutterstock.com launched in 1946 in Japan, SNE has been every generation since for various electronics. For decades, SNE produced the best TV in the world after launching its first television semi-final in 1959 and capturing the global television market by storm. Then came the video generation. Then the Walkman generation, when SNE identified personal, mobile music. And now, it's the PlayStation video game system. Along the way, it has shifted to the entertainment industry, on both sides of content and equipment. Its contributions to our electronic era are practically too much on the list and Sony continues to be a formidable player. The problem is, it usually cuts a low profile. SNE shares are now up more than 43% in last month, but traded at P/E below 15. This durable, quality electronics company may not attract headlines, but it is still a revered and important brand, next generation Disclosure: On the day of publication, Louis Navellier had positions in AMZN, CLX, JD, PYPL and STORES in this article. Louis Navellier does not have (directly or indirectly) any other position in the securities mentioned in this article. The InvestorPlace research officer responsible for this article did not hold (directly or indirectly) any position in the securities mentioned in this article. Louis Navellier had a unique start, as a graduate student who accidentally built a market that beat the stock system – with even Warren Buffett's competitive returns. In his latest feat, Louis discovered the Key to profiting from the biggest technological revolution of this generation (or any). More From InvestorPlace Why Everyone Is Investing in 5G All WRONG Top Stock Picker Reveals His Next 1,000% Winner It doesn't matter if you have \$500 in savings or \$5 million. Do this now. The post 7 Long-Term Stocks To Buy Youâ€™ll Want To Hang Onto first appeared on InvestorPlace.I recently suggested that if you could only invest in a clean energy stock - FuelCell Energy (NASDAQ: FCEL) or Plug Power (NASDAQ: PLUG) - I would go with PLUG on FCEL stock. Source: Kaca Skokanova/Shutterstock.com It was before I realized that Plug Power had attracted a \$1.5 billion investment from SK Group, one of South Korea's largest conglomerates. A week since the announcement of Plug Power, which saw the FuelCell Energy (NASDAQ: FCEL) or Plug Power (NASDAQ: PLUG) - I don't think there's any question it's buying better. InvestorPlace - Stock Market News, Stock Advisory & Trading Tips That said FCEL shares have benefited from Plug Power's luck. It is up 43% since the January 6 announcement. 7 stock dividends are growing their payouts If you're thinking about riding fuelcell momentum, you might want to consider what Plug Power's financial windfall means for both companies before jumping on the FCEL bandwagon. FCEL shares have risen 591% since mid-November in two months. FCEL share owners have an annual return equivalent to 3,500%. I don't think there's any way to coat this road other than to say that its stock buyers have done unbelievably well for such a short investment period. While you will pay regular income tax rates on your short-term capital gains if you have sold at this point, you will still make out as a bandit. There is no shame in taking profits. You might also want to consider that Jefferies analyst Laurence Alexander started coverage of fuel cell solutions providers on January 7 with a hold rating and an \$11 target price. The 'bonding stars for FuelCell Energy' by 2020, with favourable policy changes in favour of renewable energy and hydrogen production, progress on the company's own growth axis and ESG capital flows, Alexander said investors. The Fly.com reported. But now strong trend trends, 'tighter operating culture' and 'war chest' for long-term growth appear largely off the share price, Alexander argues. InvestorsPlace's Matt Matt recently discussed the so-called war chest that Alexander wrote about in his FuelCell stock review. In December, FuelCell sold 25 million shares for just \$6.50 per share, raising \$162.50 million in the process. More important than the company's willingness to sell shares at \$6.50, a 36% discount from the November 30 share price, is the fact that Orion Energy Partners, which owns a 5.9% fcel stake prior to the offering, is willing to sell down 84% of their position at a discounted price. While it is not unprecedented to hear about a company like Orion, which lends and makes investments in the energy industry, wants to get rid of its position, to do so at such a discount should make you scratch your head a little. Even more so now that FCEL is trading on \$18 as I write this, up more than 15% on the day. I wouldn't be surprised if we went through a gap of exhaustion in the second half of January. Plug Power Has Stronger Backing If Plug Power doesn't have a better list of shareholders than FuelCell Energy before the announcement that SK Group has taken a 9.9% stake in the company, it certainly does now. SK Group had \$119 billion in revenue in 2019, making it the 73rd largest company on the Fortune Global 500 list. In 2019, Plug Power had revenue of \$230 million. Of SK Group's total revenue, its energy and chemical business accounts for nearly half of the group's total revenue. The company is in the process of moving away from a re dependence on fossil fuels. Mr Erchale has ordered extensive adjustments to SK's portfolio to be completed within the next three years. This will include carving off carbon-intensive businesses and doubling the company's billions of dollars bet on EVs, computer chips, biotechnology and renewable energy, the Financial Times reported in November 2020. The era of scale competition is now behind us . . . We want to be the best company in the ESG sector. Jang Dong-hyun, president of SK Holdings, which oversees SK's 125 branches, told the Financial Times in an interview. This is before the Plug Power investment will also see the two companies form a strategic joint venture partnership with hydrogen fuel cell systems and hydrogen refueling stations for the Asian market. As I said in my latest article on Plug Power, it plans to reach \$10 billion in revenue by 2024. With \$2.1 billion in a backlog and SK Group in tow, I see higher success rates getting higher by the day. This doesn't even consider that Plug Power could soon have Amazon (NASDAQ: AMZN) and Walmart (NYSE: WMT) as shareholders and not just customers. By comparison, FuelCell's largest shareholders were CVI Holdings at 5.9%, BlackRock (NYSE:BLK) at 4.4%, and Lawrence I. Rosen at 3.7%. I don't know about you, but I'd like to have the trio of shareholders back up the share price more than what FCEL brings to the table. The Latest Bottom Line Agreement with SK Group is proof that CEO Andy Marsh's Plug Power development plan is in operation. While both stocks are Expensive, PLUG is the growth stock you should choose from. On the day of publication, Will Ashworth did not have (directly or indirectly) any position in the securities mentioned in this article. Will Ashworth has been writing about full-time investments since 2008. His publications include InvestorPlace, The Motley Fool Canada, Investopedia, Kiplinger, and several other publications in both the United States and Canada. He particularly enjoys creating a portfolio of models that stand the test of time. He lives in Halifax, Nova Scotia. At the time of writing this article, Will Ashworth did not hold a position in any of the forebrokers. More From InvestorPlace Why Everyone Is Investing in 5G All WRONG Top Stock Picker Reveals His Next 1,000% Winner It doesn't matter if you have \$500 in savings or \$5 million. Do this now. The FuelCell Energyâ€™s Post Got a \$1.5 billion issue first appearance on InvestorPlace.Mum reveals how she earns £1,000 Per day working from the homepage, after her online trading platform was worth £10 million! President-elect Joe Biden's \$1.9 trillion rescue plan announced Thursday calls for three key tax improvements for 2021 that will help Americans across the income spectrum. With stocks like Nio (NYSE:NIO) and Tesla (NASDAQ:TSLA) in the midst of seemingly undeterred asciers, electric car ETFs are one example of thematic exchange-traded funds entering the limelight. For many investors, especially those priced from Tesla or those new to this space, electric car ETFs have a lot of meaning. The funds eliminate the need for investors to identify the best personal names, on diversity and many lack significant exposure to some more challenging EV stocks. In addition, these thematic ETFs are ideal for the Biden Administration's renewable energy priorities, including the president-elect's goal of building 550,000 EV charging stations over the next decade, which will alleviate concerns about time between charges, potentially boosting EV demand in the process. InvestorPlace - Stock Market News, Stock Advisory & Trading Tips 9 Stocks that investors think are the next Amazon New Chairman may not be able to put EV in every driveway, at least not soon, but this administration and Congress are seen as hospitable to the development of the automotive industry and that could benefit the following electric car ETFs. Global X Autonomous & Electric Vehicles (NASDAQ:DRIV) KraneShares Electric Vehicles & Future Mobility ETF (NYSEARCA:KARS) SPDR Kensho Smart Mobility ETF (NYSEARCA:HAIL) iShares Self-Driving EV and Tech ETF (NYSEARCA:IDRV) Global X Lithium & Battery Technology ETF (NYSE:LIT) Electric Vehicle ETFs: Global X Autonomous & Electric Vehicles (NASDAQ:NVDA) are also among the fund's top 10 stocks. Exposure to two traditional technology names is another sign that the depth of DRIV - ETFs are exposed to five sectors led by consumer cycles and technology. DRIV is also geographically diverse when shares from about a dozen countries are represented in the fund. Positioned as an EV ETF, DRIV provides surprising depth into the wider renewable energy ecosystem and is a reliable path for EV (think-it-for-lead) EV extracts. KraneShares Electric Vehicles & Future Mobility ETF (KARS) Source: Shutterstock.com Cost Ratio: 0.72% KraneShares is commonly known for its convenient Chinese stock and emerging market funds, but investors should not sleep on the KraneShares Electric Vehicles & Future Mobility ETF. KARS turns three next week and has \$101.40 million, confirming there is room for competition in the electric car ETF arena. KARS tracks future solactive electric vehicles and mobile in indicators and similar to the said DRIV, kraneShares funds far beyond car manufacturers to touch many corners of the EV landscape. In fact, Tesla is not a KARS component and five of its top 10 stocks, including Nvidia, are pickup stocks. KARS leverages KraneShares' strong capabilities in China as many ETF stocks, including Nio, are Chinese companies. That has to do with investors because the world's second largest economy is the largest EV market. SPDR Kensho Smart Mobility ETF (HAIL) Source: xiaorui/Shutterstock.com Cost ratio: 0.45% SPDR Kensho Smart Mobility ETF is not a dedicated electric vehicle fund. Instead, it's a broad-based game that is said to be the most futures shipping ETF on the market. Looking for old protected airlines, freight and rail operators? Look elsewhere because HAIL offers tomorrow's transportation today. Base Benchmark, S&P,N Stock Traffic Index P Kensho, which provides exposure to the areas of self-driving and connected vehicle technology, drones and drone technology used for commercial and civilian applications, and advanced traffic tracking and optimization systems, according to State Street. With 59 shares, HAIL offers an extensive product line that has EV manufacturers, such as Nio and Tesla, charging station operators, auto parts manufacturers and manufacturers of realceys. Overall, more than 20 industry groups are shown in this SPDR ETF and the Its 0.45% charge is one of the lowest groups in the category. iShares Self-Driving EV and Tech ETF (IDRV) Source: Source: / Shutterstock.com Cost ratio: 0.47% iShares Self-Driving EV and Tech ETF according to The Global Self-Driving Index and FactSet Electric Vehicles and is one of the more basic EV ETFs on the market, but that's not a bit because the iShares fund is 67.4% higher in the past year, IDRV's list makes an easy comp with the said DRIV as the iShares fund features allocated to Tesla and Nio as well as Apple and Nvidia. However, competitors do not reflect each other's image as the Global X fund outperformed its iShares competitors in the past year while IDRV offered a much lower fee. IDRV provides a little more depth with 100 components, but the bottom line in this small competition is that investors should not keep both ETFs at the same time because there are too many overlaps. Global X Lithium & Battery Tech ETF (LIT) Source: Lightbox/Shutterstock.com Cost ratio: 0.75% Lithium & Battery Technology ETF Global X was an EV ETF before having real EV ETFs, i.e. the \$2.63 billion fund turned 10 last July. At that age, it's also fair to say LIT was one of the pioneers of the thematic ETF movement. LIT's success is due to a number of factors, not least of which is the willingness of early accepters to bet on rising demand and Global X sees critics close to seeing that, a decade ago, calling LIT too focused on a fund to gain widespread acceptance. These days, LIT is ranked as one of the top paths to access to the component side of the EV story and the fund is 158% higher in the past year - a star show considering Tesla isn't even 6% of the fund's weight. At a high level, the industry's ecosystem begins to go upstream with lithium miners extracting metal from the earth, according to the Global X study. Battery manufacturers combine carbonate or hydroxide with materials to form a phonede and anode, together form an individual battery cell. Thousands of cells can be combined to create a battery pack for the EV. On the day of publication, Todd Shriber did not have (directly or indirectly) any position in any of the securities mentioned in this article. Todd Shriber has been a contributor to InvestorPlace since 2014. More From InvestorPlace Why Everyone Is Investing in 5G All WRONG Top Stock Picker Reveals His Next 1,000% Winner It doesn't matter if you have \$500 in savings or \$5 million. Do this now. Post 5 electric car ETFs Getting a Big Biden Boost appears first on the InvestorPlace.AI interest rate of 8.6% on its savings account, the cryptocurrency fintech platform BlockFi is offering an interesting option for frustrated savers with low interest rates. China is one of the world's most polluting countries, a fact that has since emerged as a growing. If you are getting a portfolio of stocks to buy for just \$5,000, the advent of Share ownership has made it a lot easier. Google from the segmented stock portfolio, and you get \$27,000 results with everything from reviews of the best segmented equity brokerages to links to some of the top players in the market's growing field. Many people think of Robinhood when they think of segments, but the truth is that almost all the major online brokers in this country have several offers or services. InvestorPlace - Stock Market News, Stock Advisory & Heck Trading Tips. I can remember years ago, when FolloFN was the only game in town. Launched in 2000, it was acquired by Goldman Sachs (NYSE:GS) in May 2020. FolloFN's self-directed accounts are expected to be transferred to Interactive Brokers (NASDAQ:IBKR) in early 2021. In the meantime, for those who don't want to do the job of building a \$5,000 stock portfolio to buy, here are 10 recommendations to get you started. Alphabet (NASDAQ:GOOG, GOOGL) Tesla (NASDAQ:TSLA) Nvidia (NASDAQ:NVDA) SVB Financial (NASDAQ:SIVB) Roku (NASDAQ:ROKU) Berkshire Hathaway (NYSE:BRK. A, NYSE:BRK. B) Dollar General (NYSE:DG) Apple (NASDAQ:AAPL) Williams-Sonoma (NYSE:WSM) Thor Industries (NYSE:THO) 9 Stocks that investors think amazon next Their share price will rise to \$5,000 or less. To make things interesting, all 10 shares must have a stock price in excess of \$100. Shares to buy: Alphabet (GOOG, GOOGL) \$1,740 Source: BigTunaOnline/Shutterstock.com It's funny, I had intended to include Amazon

(NASDAQ: AMZN) in my list of 10 stocks to buy, but for me that was limiting my name to those companies with stock prices greater than \$100, the e-commerce giant's \$3,166 share price would make it awfully difficult to match nine more than \$5,000. So I went with Alphabet, a company I didn't write about at all in 2020, but helped me achieve my mission. InvestorPlace's Mark Hake recently suggested that rising ad sales make it an attractive investment in 2021. My colleagues compared Google to apple, Microsoft (NASDAQ: MSFT), and Amazon prices. He argued that Google should have the same price as the three companies at \$1.43 trillion or 6.7 times more than sales. When I wrote this, Google's market capitalization was \$11.8 billion, 17% below Hake's simple calculation, which put its share price at \$2.112 per share. I like the opposite side, Tesla (TSLA) \$845 Source: franz12/Shutterstock.com The second highest share price in our \$5,000 portfolio, we can thank Elon Musk for making the year stock split for one in August 2020. Without it, TSLA would account for 86% of our investment. I'm an unabashed Tesla fan, so I'm not going to give you why the price is over-the-top, though there's no question put all the other major car companies to shame with its \$810 billion market capitalization. InvestorPlace contributor Matt McCall recently gave investors some wise advice on electric vehicle manufacturers (EV). McCall believes that instead of clenching on the price you pay its stock, embracing the fact that even the mighty Tesla has adjustments, so buy like crazy on the rare occasion that it happens. To illustrate his point, McCall referenced the september 2020 withdrawal, shortly after its shares were split. On August 31, it was trading just under \$500. In a week, it fell 34% after Tesla was removed from the annual supplements list for the S&P 500. 7 cheap stock to buy when Democrats finally gained control, Tesla was added to the index on December 31. When money managers add TSLA to their portfolios, it moves even higher. Nvidia (NVDA) \$528 Source: Hairem/Shutterstock.com If you're one of the lucky investors who joined the Nvidia bandwagon five years ago when it traded for about \$26, you're sitting on an annualized total profit of more than 79% through January 13. It's crazy to think things could get better for NVDA shareholders over the next five years. However, they really can, with growth in gaming, cloud computing and artificial intelligence. As my InvestorPlace colleague, Faizan Farooque, recently stated, you certainly won't buy Nvidia if you're a value investor - it trades at 45 times its forward earnings, much higher than many of its colleagues - but when it can increase revenue at 50% a quarter and continue to beat analysts' expectations, it certainly deserves high prices. In June 2019, I argued that Nvidia's free cash flow made it a great stock to buy on dips. At the time, it had lost about half its value in nine months - October 2018 to June 2019 - and was trading around \$145. About 18 months later, it nearly four times increased and generated more than \$4.2 billion in free cash flow over 12 months. Buy some now and wait for the next big dip. It is bound to happen sooner or later, no matter the short-term outlook. SVB Financial (SIVB) \$465 Source: Pavel Kapysh / Shutterstock.com I'm not going to talk too much about SVB Financial because it's one of those bank stocks that you have to learn for yourself to understand why it's so special. You wouldn't think this was the case with insurance analysts of its stock. Currently, 21 analysts include SIVB, with eight reviews it buys and 12 an organization with an average price target of \$424.49. Sure, it's come a long way in the past year compared to its colleagues - it has a year's total profit of 74.2% - but that's because investors recognize that the bank's lasers like that focus on providing lending, asset management, and banking services to innovation and entrepreneurs will always be in demand. It recently announced that it would pay \$900 million to buy Boston Private Financial Holdings (NASDAQ: BPFH) for a combination of cash and stock. Private banks have boston-based office specializing in asset management and other banking services. At the same time, SVB Financial's asset management business will have nearly \$18 billion in assets under management. The 7 best cannabis stocks on the market right now continue to ignore SIVB at your per danger. Roku (ROKU) \$418 Source: JHVEPhoto JHVEPhoto Shutterstock.com streaming platforms have started to heat up in 2021, up 26% over the previous year and more than 205% in the last 52 weeks. Roku and HBO Max's parent company, Warner Media, have buried their long-standing disagreement recently by announced that the streaming service will be available on Roku as of December 17, 2020. By getting a spot on Roku, HBO Max is now on all the big over-the-top platforms. We believe that all entertainment will be streamed and we are excited to partner with HBO Max to bring their incredible library of iconic entertainment brands and live stage releases to the Roku household with over 100 million people making Roku the no.1 tv streaming platform in the US. Scott Rosenberg, SVP's corporate platform, said in a statement. A key part of this statement is that Roku believes that all entertainment will eventually be streamed. I couldn't agree more. That's why I offered ROKU stock in December 2017 and still recommend it among the stocks to buy in 2021. Berkshire Hathaway (BRK. Ah, BRK. B) \$235 Source: Jonathan Weiss/Shutterstock.com I recently read an article about the reasons why Warren Buffett failed in 2020. This kind of oracle analysis of Omaha has been going on for years, maybe as long as Buffett has invested in stocks to buy. Yes, Berkshire Hathaway performs serious S&P;D The P 500 is in 2020 - up 2.5% from 16.5% for the index - but I have always believed that the biggest boost to BRK shares will come when the company shares have been methodly wound down by the passing of Buffett and Charlie Munger. Consider that its equity portfolio, large at \$271 billion, accounts for only a third of Berkshire's assets by the end of September 2020. I can assure you that the true value of \$418 billion or so in private property on its balance board is worth more than this. When it comes time to wind it down, the board will do what is necessary to ensure fair value is obtained for each business. It is possible that this process may take a decade or more. The 7 best startups you can buy on StartEngine right now When people say that Warren Buffett has lost his touch, they forget that the final tally has not been given. Not with a long shot. Dollar General (DG) \$213 Source: Jonathan Weiss/Shutterstock.com It's not a secret that Dollar General serves customers without a tremendous amount of disposable income. It probably also doesn't come as a surprise that its employees don't flush with cash, so the fact that it will pay for those of its 157,000 employees who receive a four-hour paid vaccine is noble. And smart business. "We don't want our employees to have to make choices getting a vaccine or going to work," Dollar General (DG) said in a press release, noting that its hourly workers face obstacles to getting vaccinated, such as travel time, mileage or child care needs. If there is a retailer that has done well Covid-19, Dollar General will have to top the list. In early December, Dollar General reported third quarter 2020 results including same-store sales growth of 12.2% and earnings per share up 62.7%. As a result, it was passed on a total of \$173 million in 2020 for employee appreciating bonuses. As they continue to open more stores while simultaneously increasing gross margins, the fact that they remember that their employees are the ones who bring this luck to shareholders is a big reason why DG shares will continue to rise higher in 2021. Apple (AAPL) \$130 Source: Hadrian/Shutterstock.com Most of the talk around AAPL shares right now revolves around its long-running Titan project and its efforts around its own self-driving electric vehicle offering. The Verge recently reported that Apple held discussions in 2020 with Canoo (NASDAQ: GOEV), the EV startup that uses a skateboard-based platform to provide a much better cabin design for its future vehicles. Canoo seems to just want some capital. Apple, on the other side, has been thinking more about buying the business and integrating it into its current work in the field. Both did not come to an agreement. Canoo has publicly and Apple is currently working with Hyundai (OTCMKTS: HYMTF) on bringing self-driving EV to market by 2024. Analyst Dan Ives of Wedbush Securities recently suggested that Apple could be worth \$3 trillion around 2022 due to a sharp increase in iPhone 12 sales. He could sell \$250 million by 2021. If Apple continues to perform at this rate, a market capitalization of \$3 trillion could be on the horizon in 12-18 months, Ives is reported to have said. 7 Dividend stocks are growing their payouts As I wrote this, it's at \$22 billion. Williams-Sonoma (WSM) \$125 Source: design of Jack/Shutterstock.com Some news outlets report that the retailer's chief executive, Laura Alber, sold some Williams-Sonoma stock just before Christmas. Don't worry; it is only 15,000 shares or 3.5% of her total shares. And it is part of her Code 10b5-1 trading plan that begins in September 2019. As I always wanted to say, even wealthy CEOs have bills to pay. Over the past year, Williams-Sonoma shares have yielded a total return of 61.4% to its shareholders, including Alber. That's double the profitability of the general specialty retail industry and three times the overall performance of the U.S. market. In June 2016, I called WSM one of the best retail stocks to buy due to its excellent multi-channel experience. Five years later, nothing has changed in that assertion. During Covid-19, business at the retailer was full speed ahead. Here's what I said about it in December: It has a business that's ideally balanced between online and brick-and-mortar sales. In the second quarter, it created 76% of online sales. In the third quarter, due to new coronavirus restrictions, its online sales accounted for 70% of its total sales - while growing by nearly 50% compared to last year and it was during an epidemic, I said on December 9. More importantly, its third-quarter profit was through the roof - up 151% to \$2.56 a share thanks to significantly higher profits - and that was only through November 1. It does not include Black Friday and Cyber Monday. The world is going digital, and that's good news for Williams-Sonoma. Thor Industries (THO) \$105 Source: Angel DiBilio/Shutterstock.com There's no question that 2020 is good for entertainment car manufacturers like Thor Industries, as young and old people look great outdoors, away from the Maddening, Covid-19 crowd. The problem for investors who have watched the RV industry for any period of time is that good times never seem to last. In the case of the novel coronavirus, once the vaccine makes people comfortable with packing together in large crowds, the great outdoors won't be nearly as attractive as Paris or Australia. That being said, the latest push into RVs could come from a consy of consumers who can actually go to the open road. All dealers are reporting a high combination of first-time buyers that are evident due to the lack of commercial units in, said Wells Fargo analyst Tim Conder in a Note July 15, 2020. Dealers are saying as high as 80% of customers are first-time buyers... compared to the typical 25% mixture. The epidemic is driving purchasing decisions for new participants. If even half of first-time buyers stick long enough to upgrade to a larger or better model, Thor Industries may not have to worry about the event last downturn. To me, THO is one of the perfect stocks to buy for the long haul, buy more whenever it fixes more than 5-10%. On the day of publication, Will Ashworth did not have (directly or indirectly) any position in the securities mentioned in this article. More From InvestorPlace Why Everyone Is Investing In 5G All WRONG Top Stock Picker Reveals His Next 1,000% Winner It doesn't matter if you have \$500 in savings or \$5 million. Do this now. The Post 10 Smart Stocks to Buy for \$5,000 first appearance on InvestorPlace.It is like the suspicion of Advanced Micro Devices (NASDAQ: AMD) continuing to wait to wake up one day and see the stocks in the free fall as bulls overplayed their hands. The truth is, AMD shares are still a big bet on the future of technology.

Source: Joseph GTK / Shutterstock.com As time passes, computer tasks do not become poor stronger. They are becoming more demanding, increasing demand for GPUs and chipmakers like AMD. The fact that AMD was a penny stock a few years ago and on the brink of survival has reinforced a lot of doubt in the bear farm. Fortunately, their subject is out of line. While it is possible that the company has one or two glitches along the way, AMD continues to occupy market share at a time when the market is growing. InvestorsPlace - Stock Market News, Stock Advisors & Trading Tips It's exactly the kind of thing that up-price archaeologists want to see and that's exactly why stocks have done so well. Now AMD is relying on a range of industries - including cryptocurrencies, AI, automotive, games and cloud computing to name a few industries - to boost its business. Unless these industries will unravel, nor amd stocks. Breaking down advanced micro devices As we round out 2020, analysts expect AMD to increase revenue by more than 40% to \$9.5 billion. They continue to expect earnings to nearly double to \$1.23 per share. 9 stock that investors think is the next Amazon Just think about that in a minute. In a year devastated by an epidemic, Advanced Micro Devices is forecast to increase sales by 40% and almost double its profits. Even better, those estimates accelerated dramatically over the past 12 months. Let's put it this way: Consensus estimates call for 27% more revenue growth by 2021 to \$1.2 billion and earnings up nearly 50% to \$1.81 per share. By July 2020, these consensus estimates are at just \$8.4 billion and -1.05 dollars per share. Again, that's where estimates stand for 2021 about six months ago. Now AMD can easily surpass those totals in 2020. Estimates call for 20% more revenue growth by 2022. Who knows, maybe that's conservative too. Friends, the key to successful long-term investments doesn't start with a stock chart. It starts with identifying long-term business trends, then focuses on companies that are winning those spaces. The technique matters from the point of view of time, but with enough patience and time, the fundamentals will be what drives those names higher. As these markets finally grow, so are the opportunities for AMD. That's what has allowed the company to go from a penny stock to making major acquisitions. Growth beyond the Field This is another trend to focus on: finance. Over the past few years, but especially in the past 18 months, AMD has seen its free cash flow soar, gross profit and its operations rising and its debt plunging. Gross margin has increased from a low to an average of 20% in 2017 to 44.5% today. Operating profit margins have fallen from around negative 10% at the beginning of 2017 to more than 13%. Two years ago, free cash flow was near a negative \$250 million. Six months later, AMD had free cash flow to the capital. It now sits at nearly \$700 million. By the end of 2017, AMD had total assets of \$3.54 billion and total liability liability of \$2.92 billion. Now, the numbers sit at \$7 billion and \$100 billion respectively, represents a major improvement. Total long-term debt went from \$13.3 billion to \$578 million in that period as well. In other words, AMD is more profitable, has less debt and has the right to with your own financials. AMD Stock Trading Click toEnlargeSource:TrendSpider's courtesy chart The truth is, AMD shares can be quite hard to pin down when it comes to trading. It doesn't trade quite well in relation to the technique, but it tends to give a lot of wrong moves. That is, it seems to break just to capture and reverse higher, or it seems to escape, just to reverse lower. The following took place this week, with stocks climbing to new highs on January 11. However, the stock was unable to close at that high and pulled back in the next session. Does that mean the run is over? It's nothing. Look at how AMD stocks tend to trade. It goes on those big runs, achieves a tremendous amount of ground, then consolidates. Sometimes that consolidation is a few weeks. Another time it's a few months. The stock was a combined stock for the entire first half of 2020, booming from the mid-50s in July to the mid-80s \$ 80 a month later. Then AMD shares traded sideways before jumping higher in December. That's the pattern here. Look for integrated models like AMD that are resting for the next move. These are opportunities for investors and when stocks do not fall, it is constantly met by support. On the day of publication, 2015, 2015, 2015, 2015, 2015, matt mcall and InvestorPlace research staff were not primarily responsible for this article being held (directly or indirectly) any position in the securities mentioned in this article. More From InvestorPlace Why Everyone Is Investing in 5G All WRONG Top Stock Picker Reveals His Next 1,000% Winner It doesn't matter if you have \$500 in savings or \$5 million. Do this now. The Luckin Stock Post May be a Long-Shot Worth Betting On first appeared on InvestorPlace.The idea that stock value is finally about to awaken after a decade-long sleep is almost a joke in financial worlds. What is at least slightly different about Vanguard's view is that its model suggests that investors have been right in staying away from valuable stocks, at least until the last few years. Our research indicates that premium value and recent outstanding performance of growth stocks may be explained in part by long-term inflation trends and a lack of material acceleration in earnings growth over the past decade, the company said. Most financial markets will be closed for celebrations of the lives of civil rights leaders, one of the first since protests over the killing of George Floyd touched off major protests across the country. Expert language secrets: How to start learning any language in just 15 minutes a dayAndrew LeftCitron Research's Andrew Left criticized insurer Lemonade Inc(NYSE: LMND) on Friday, saying many of its stocks were based on empty marketing tactics. The Lemonade Bear Case: In a live video on Twitter, Left dismissed Lemonade Inc's claim to bring new technology into the insurance industry, saying the company's technology is no different from insurers like Progressive Corp. (NYSE: PGR) or State Farm. They lied to their customers and her. seller's short note. The company has not responded to a request for comment. Not the ESG company: He also blasted lemonade for claiming to be a good social company an easy marketing plug. Left said Lemonade is leveraging the interest of younger investors in supporting companies with positive social impact, such as Tesla Inc (NASDAQ: TSLA). It is playing out millennium investors, he said, adding that the company has higher multiples than Zoom Video Communications (NASDAQ: ZM), Uber Technologies Inc (NYSE: UBER) or Tesla Inc (NASDAQ: TSLA). Lemonade insiders have sold \$400 million in the past six months, but gave just \$1 million to charity last year, he said. Left said the Securities and Exchange Commission and the Federal Trade Commission should take a closer look at companies that make claims of social responsibility. Price action: Shares of Lemonade ended Friday trading down 6.79% at \$147.74 on Friday. The rest of the video was posted to Twitter at 11:30 a.m.Related Link: XL Fleet Spikes On CEO's CNBC Plug, Citron's Long CallSee more from Benzinga \* Click here for options trades from Benzinga \* Hillman Group in Talks With Tilman Ferritta SPAC. All rights are preserved. Track the market with an eye to key opportunities. Raymond James strategist McCourt signed both risks and opportunities in current market conditions. The chances, in his opinion, stem from obvious factors: Democrats won both Georgia Senate seats in the recent runoff vote, given the Biden Administration's majority support in both House of Congress - and increased the percentage of meaningful financial support signed into law in the short term. More importantly, the coronavirus vaccination program is underway, and reports are showing that Pfizer's vaccine, one of two approved in the United States, is effective against new strains of the virus. A successful vaccination program would speed up economic recovery, allow states to loosen lock-in regulations - and put people back to work. The risks also come from the political and public health sectors. House Democrats have passed impeachment clauses against President Trump, despite his imminent end to office, and that passing reduces the chances of political reconciliation in a severely polarised environment. And while the COVID strain is in line with the current vaccine, there is still the risk that a new strain will grow without being covered by existing vaccinations - which could restart cycle lockdowns and economic decline. One risk McCourt sees, in addition to the two, would be a sharp increase in inflation. He doesn't discount that, but sees it as not happening anytime soon. ... Producing/service inflation is only really a possibility AFTER reopening, so the market feels a bit bullet proof in the very short term, and so the rally continues, with dems winning the GA race just adding fuel to the stimulus fire, McCourt noted. More of McCourt's colleagues among Raymond James analysts are keeping the risks in mind, and putting their imprimatur on strong dividend stocks. We looked at Raymond James' recent calls and using the TipRanks database, we chose two stocks with high-yield dividends. These Buy-rated tickers bring a dividend return of 7%, a strong appeal for investors interested in using good time now to set up a defensive firewall should the risks come to life. Corporate Product Partners (EPD) We will start in the energy sector, a business segment long known for both high cash flow and high dividends. Enterprise Product Partner is a mid-source company, part of a network that moves hydrocarbon products from wells to storage farms, refineries and distribution points. Enterprise controls more than 50,000 miles of pipelines, transportation terminals on the Texas Gulf Coast, and storage facilities for 160 million barrels of oil and 14 billion cubic feet of natural gas. The company was hurt by low prices and low demand in the 1H20, but partly recovered in the second half. Revenue returned, growing 27% a week to reach \$6.9 billion in the third quarter. This is down from the same period last year, but 6% higher than the third quarter forecast. Q3 earnings, at 48 cents per share, were just forecast, but increased by 4% over the previous year and 2% a week. EPD recently announced its 4:20 dividend distribution, at 45 cents per common share. This is up from the previous payment of 44 cents and marks the first increase in two years. At \$1.80 annualized, the payout output was 7.9%. Among the males is Raymond James' Justin Jenkins, who rates the EPD a Strong Buy. Analysts offered the stock a \$26 price target, which implies a 15% upside from current levels. (To see Jenkins' track record, click here) In favor of his price-raising approach, Jenkins noted, in our view, the EPD's unique combination of integration, balance table strength and ROIC track record remains the best in class. We found epd is said to be best positioned to withstand volatile landscapes... With the footprint of EPD, increased demand, project growth, and contract slopes should more than offset supply headwinds and lower y/y marketing results... It's not often that analysts all agree on a stock, so when it happens, take note. The EPD Strong Buy consensus rating is based on 9 Unanimous Purchases. The stock's \$24.63 median price target shows a reversal of 9% from the current share price of \$22.65. (See EPD stock analysis on TipRanks) &P;A&P; T, Inc. (T) AT&T&P; T is one of the market's instantly recognizable stocks. The Company is a long-term member of S&P;S&P 500, and it has a reputation as one of the stock market's best dividend payer. &P;A&P;T&P; T is a real big capitalization industry giant, with a market capitalization of \$208 billion and the largest network of mobile and landline services in the US. The acquisition of TimeWarner (now WarnerMedia), in an operational process from 2016 to 2018, gave the company a large stake in the mobile content streaming business. &P;A&P;T&P; T saw revenue and earnings slump in 2020, under pressure from the corona epidemic - but the decline was modest, as the same epidemic put a premium on telecommunications and networking systems, which tended to support AT&T's business. On the positive side, free cash flow has increased from \$11.4 billion to \$12.1 billion and the company reported a net profit of 5.5 million new subscribers. Subscriber growth is driven by the deployment of new 5G networks - and by premium content services. The company has maintained its reputation as a dividend champion, and has made its most recent dividend statement for payment in February 2021. The payment, at 52 per common share, was the fifth consecutive at current levels and annualizes to \$2.08, giving a yields of 7.2%. For comparison, the average dividend among peer-to-peer technology companies is just 0.9%. AT&T holds strong dividend for 12 years Raymond James analyst Frank Louthan sees AT&T as a classic defensive value stock, and describes the current state of T as one with bad news 'baked in'. [We] believe there is more that could go right in the next 12 months than could get worse for AT&T. T. Throw in the fact that stocks are heavily shorted, and we believe this is recipe for upside. Big cap value names are hard to come by, and we think investors can wait a few months for a reversion which means that while locking in a 7% yield should be rewarded for buying AT&P.A. T at current level. Louthan opined. In line with these opinions, Louthan rates T an Outperform (i.e. Buy), and his \$32 price target implies room for 10% growth from current levels. (To view Louthan's track record, click here) What do the rest of the streets think? Looking at the consensus analysis, opinions from other analysts are more widely spread. 7 Buy ratings, 6 Hold and 2 Extra Sales up to a moderate purchase consensus. In addition, the average price target of \$31.54 shows -9% potential increase. (See AT&P.A stock analysis T on TipRanks) To find good ideas for dividend stocks that trade with attractive prices, visit TipRanks Best Stocks to Buy, a newly launched tool that combines all of the equity insights of TipRanks. Disclaimer. The comments expressed in this article are just those of featured analysts. Content may only be used for informational purposes only. It is very important to do your own analysis before making any investment. If you haven't heard of savers' credit, you'll want to catch up with the pace. New retirees are like recent college graduates - they are alone after years of the same routine, and they have to find a new way to follow. This is the kind of venture that retires into the unknown, engaged in a new job they have never done before. Investors pursuing vaccine stocks may be baffled by the market's handling of Pfizer (NASDAQ: PFE) and wondering why Pfizer shares are not trading higher. Source: Manuel Esteban/Shutterstock.com After all, the New York-based multinational pharmaceutical giant (and its German partner) has come to prominence in its fight against the new coronavirus with an innovative vaccine that seems to offer impressive protection against Covid-19. This success fuels hopes the worldwide epidemic can be contained. Man, shouldn't that make a company fly high? InvestorPlace - Stock Market News, Stock Advisory &P; Trading Tips 9 Stocks that investors think is the next Amazon Maybe, but the market - and those who use it - evaluate the value of the stock through a complex assessment. This assessment combines many factors, mainly the strength of the company's financial fundamentals. Other factors include product demand and consumer support. Pfizer Stock at a Glance PFE increased throughout last year. Most likely, traders price in that performance some time ago. In general, the market has a forward-looking view. This outlook may be interrupted, but those effects tend to be concise. To me, Pfizer stock is a candidate for slower and more stable conditions is the spectacular surge. The market has rewarded the stock for its vaccine success. Continued success throughout this year will almost certainly buy PFE shares. This will make it easier for the stock to climb on the back of other good news. Pfizer Pfizer is attractive to investors with a long view because of its development pipeline. The company focuses on creating new products to replace sales from older drugs. Pfizer has taken steps to transfer older drugs to other companies. This shows his commitment to staying streamlined and agile. Pfizer's Covid-19 vaccine is a prime example. Pfizer did not insatned the vaccine. Instead, it is a process of BioNTech (NASDAQ: BNTX), a small biotechnology company based in Germany, that form the basis of anti-Covid drugs. Officials of the German company approached Pfizer about cooperation to bring it to market. By agility, Pfizer was able to quickly form partnerships and, together with BioNTech, provide important vaccines. This is impressive because Pfizer is a big company. Drug sales in 2019 reached \$ 51.8 billion. The consistency of Pfizer shares is expressed through a 52-week trading range. PFE topped last year at \$43.08 per share. But its low point was \$27.88, much better than many popular stocks. The company's market capitalization is about \$206.7 billion and its earnings price ratio is about 24. The dividend is 4.2%. A long-term play As I wrote earlier, Pfizer stock is a great candidate for a long-term portfolio. That is, investors are not drawn by rapid pops and declines but are solid performance for years over months or even days. I'm not alone in this review. My InvestorPlace colleague Larry Ramer recently said equity won't skyrocket but it fits the bill for conservative long-term investors. In his article on January 7, Ramer cited the company's development program and admirable dividends: I believe Pfizer shares are unlikely to get a further meaningful lift from the vaccine for coronavirus... As a result, I still believe that short-term investors and those looking for a relatively fast growth should not buy stocks. For conservative, long-term investors and those seeking dividend income, Pfizer looks like a great buy. Income investors will appreciate that Pfizer has increased payments several times and is expected to continue. In addition, the company has promised new drugs in development and no one is expected to sunset for many years. Pfizer shares were favored by many investors before succeeding with the coronavirus vaccine. The company nurtures its drug development program but is also ready for deals with others to bring products to consumers. And remember, its relationship with BioNTech is not limited to the Covid-19 vaccine but also includes other products. Combined with a dividend of about 4.2%, Pfizer shares are a acquisition for investors looking for a solid pharmaceutical company. On the day of publication, Larry Sullivan was not (directly indirectly) any position in any securities mentioned in this article. Larry Sullivan is a veteran Florida journalist who has covered banking and finance for years. He is a former investment editor at U.S. News &P; &P; Report in Washington D.C. and begin writing for InvestorPlace in 2020.
